1 Appendix C. Structural and topological analysis of the images.

This document presents the algorithm employed to extract key shape descriptors, specifically the enclosing surface and volume, as detailed in Algorithm 1. Additionally, Tables 1 and 2 outline the comprehensive structural and topological analysis conducted on each of the 66 3D voxelized objects examined in this study. The analysis includes descriptors such as object dimensions, Euler characteristics, and the number of cavities and tunnels. These descriptors are essential for understanding the spatial complexity and topology of the objects, which play a critical role in accurately modeling and analyzing the 3D structures.

This analysis highlights a critical issue of multicollinearity among the predictor variables, which occurs when independent variables are highly correlated. Multicollinearity complicates the ability of traditional regression models to estimate the individual effects of each predictor, resulting in unstable and unreliable coefficient estimates. To illustrate this, Figure 1 show this problem.

Table 1: Objects for testing and its and dimensions (Part 1).

Name	Dimension	Euler	Cavities	Tunnels
Object1	6×5×5	2	0	0
Object2	7×10×9	-4	0	5
Cup	29×25×41	0	0	1
Dragon	42×64×90	0	0	1
Sphere0	65×65×31	1	0	0
Sphere3	65×65×31	3	2	0
Sphere4	65×65×31	3	2	0
Sphere5	65×65×31	1	2	2
Torus	67×65×10	0	0	1
Torush	67×65×10	-1	0	2
Vase	69×53×41	0	0	1
Cheese	102×102×102	-2	1	4
Squirrel	128×128×128	1	0	0
Armchair	128×128×128	-1	0	2
Axe	128×128×128	0	0	1
Batmobile	128×128×128	5	57	130
Bird	128×128×128	-1	0	3
Owl	128×128×128	0	0	1
Dragon	128×128×128	-8	0	9
Elephant	128×128×128	1	0	0
Speakers	128×128×128	-5	0	7
French Horn	128×128×128	-88	0	104
GUN	128×128×128	-7	0	8
Moon	128×128×128	1	0	0
Bear	128×128×128	1	0	0
Sheep	128×128×128	1	0	0
Penguin	128×128×128	1	0	0
Pig	128×128×128	1	0	0
Turtle	128×128×128	1	0	0
Table Lamp	128×128×128	1	0	0
Bolt	256×256×256	1	0	0
Chair	256×256×256	1	0	0
Chameleon	256×256×256	3	0	0
House	256×256×256	-256	0	2258

Table 2: Objects for testing and its and dimensions (Part 2).

Name	Dimension	Euler	Cavities	Tunnels
Ship	$256 \times 256 \times 256$	-8	0	22
Skateboard	$256 \times 256 \times 256$	0	0	1
T34 Soviet Tank	$256 \times 256 \times 256$	-143	0	149
Axolotl	$256 \times 256 \times 256$	-1	0	2
Plane	$256 \times 256 \times 256$	1	0	0
Car	$256 \times 256 \times 256$	1	0	0
Creeper	$256 \times 256 \times 256$	1	0	0
Giraffe	$256 \times 256 \times 256$	1	0	0
Karambit	$256 \times 256 \times 256$	0	0	1
Wolf	$256 \times 256 \times 256$	1	0	0
Nintendo	$256 \times 256 \times 256$	760	0	1
Duck	$256 \times 256 \times 256$	1	0	0

Brick	$512 \times 512 \times 512$	1	0	0
Peak	$512 \times 512 \times 512$	-3	0	4
Pyramid	$512 \times 512 \times 512$	1	0	0

Algorithm 1 Calculate Volume and Enclosing Surface of 1-Voxels Regions in a 3D Binary Image

Require: 3D binary image Image where 1 represents the region of interest

Ensure: Total volume and enclosing surface of the 1-pixel regions in the 3D image

```

1: Initialize Count_ones  $\leftarrow 0$ 
2: Initialize Enclosing_surface  $\leftarrow 0$ 
3: if Image.ndim  $\neq 3$  then
4:   raise ValueError("Input should be a 3D binary image.")
5: end if
6: for  $i \leftarrow 0$  to Image.shape[0] - 1 do
7:   for  $j \leftarrow 0$  to Image.shape[1] - 1 do
8:     for  $k \leftarrow 0$  to Image.shape[2] - 1 do
9:       if Image[ $i, j, k$ ] = 1 then
10:        Count_ones  $\leftarrow$  Count_ones + 1
11:        Initialize neighbors  $\leftarrow 0$  {Initialize the neighbor count}
12:        if  $i = 0$  or Image[ $i - 1, j, k$ ] = 0 then
13:          neighbors  $\leftarrow$  neighbors + 1
14:        end if
15:        if  $i =$  Image.shape[0] - 1 or Image[ $i + 1, j, k$ ] = 0 then
16:          neighbors  $\leftarrow$  neighbors + 1
17:        end if
18:        if  $j = 0$  or Image[ $i, j - 1, k$ ] = 0 then
19:          neighbors  $\leftarrow$  neighbors + 1
20:        end if
21:        if  $j =$  Image.shape[1] - 1 or Image[ $i, j + 1, k$ ] = 0 then
22:          neighbors  $\leftarrow$  neighbors + 1
23:        end if
24:        if  $k = 0$  or Image[ $i, j, k - 1$ ] = 0 then
25:          neighbors  $\leftarrow$  neighbors + 1
26:        end if
27:        if  $k =$  Image.shape[2] - 1 or Image[ $i, j, k + 1$ ] = 0 then
28:          neighbors  $\leftarrow$  neighbors + 1
29:        end if
30:        Enclosing_surface  $\leftarrow$  Enclosing_surface + neighbors {Add to total surface area}
31:      end if
32:    end for
33:  end for
34: end for
35: return Count_ones, Enclosing_surface

```
